On or about Tuesday, July 30th 2013, the UMBC cable television system will begin to switch to all digital service. The upgrade will provide a clearer picture and additional channels. You will need to do a channel scan to receive the new programming. Most new televisions made after 2007 should be compatible.

To determine if your television is currently capable of receiving the new signal, perform a channel scan and tune to Cable Channel 3. If successful, you should see a notice stating that you are ready for the transition.
